FACING REALITY
CYBERSECURITY IN 2025

Businesses must adjust swiftly to emerging challenges, international conflicts, and weaknesses to maintain operational strength.

EMERGING TECHNOLOGY

New technologies like AI and ML are reshaping industries, with 66% of organizations expecting AI to boost threat detection.

AI: A DOUBLE-EDGED SWORD

Leaders must ensure AI tools are securely deployed. Only 37% of organizations have processes in place to assess AI security.

GEOPOLITICAL TENSIONS

Global conflicts, like U.S.-China friction, create safeguarding dangers that organizations must address to mitigate exposure.

SUPPLY CHAIN VULNERABILITIES

Interconnected networks expose organizations to risks, with 54% of companies citing supply chain dependencies as barriers.

WORKFORCE SHORTAGE

A growing talent gap leaves organizations exposed, with two-thirds of companies lacking qualified professionals.

SHIFT TO RESILIENCE

Shifting focus to resilience via robust defenses ensures business continuity and adaptability against emerging threats.

Recognize these signs to navigate future uncertainties.
